12 palms per hectare

DxP Socfindo SM palms are planted evenly distributed at 12 trees per hectare without reducing the population of the main oil palm cultivated (high-yielding variety).

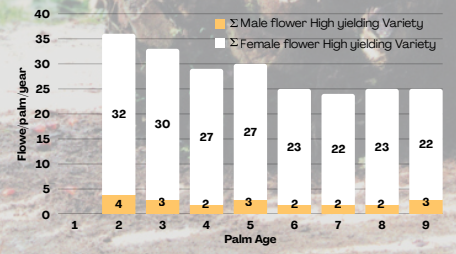

Flower production in DxP Socfindo SM palm

DxP Socfindo SM as the provider of male flowers

Flower production in high-yielding variety

DxP Socfindo SM for a better yield

DxP Socfindo SM palms are complementary palms that provide sufficient male flowers for the pollination process of the main cultivated palms (high-yielding oil palm variety)
